### INQUIRIES

- *for further information about statistics in this publication and the availability of related unpublished statistics, contact Mr Jon Havelock on Canberra (06) 252 7204 or Labour Force Inquiries in your ABS State office (see page 31 for contact numbers).*
- *for information about other ABS statistics and services please refer to the last page of this publication.*

### ADDITIONAL DATA ON REQUEST

The ABS offers a range of unpublished data from this survey upon request. An order form can be found on page 30.

---

## SUMMARY OF FINDINGS

### Overview

An estimated 8,602,300 persons aged 15 to 69 years had worked at some time during the year ending February 1994. Some 90 per cent of these persons were working in February 1994, with the balance either looking for work (4.3%) or not in the labour force (5.5%) (Table 5, Diagram 1).

Of the 7,760,800 persons working in February 1994 —

- 78 per cent had been in their current job for the whole year;
- 14 per cent had started their current job during the year, and had a previous job during the year; and
- 8.6 per cent had started their current job during the year, and had no previous job during the year.

Of the 1,070,000 persons working in February 1994 who had a previous job during the year —

- 36 per cent had changed industry from previous to current job; and
- 30 per cent had changed occupation from previous to current job (Table 1).

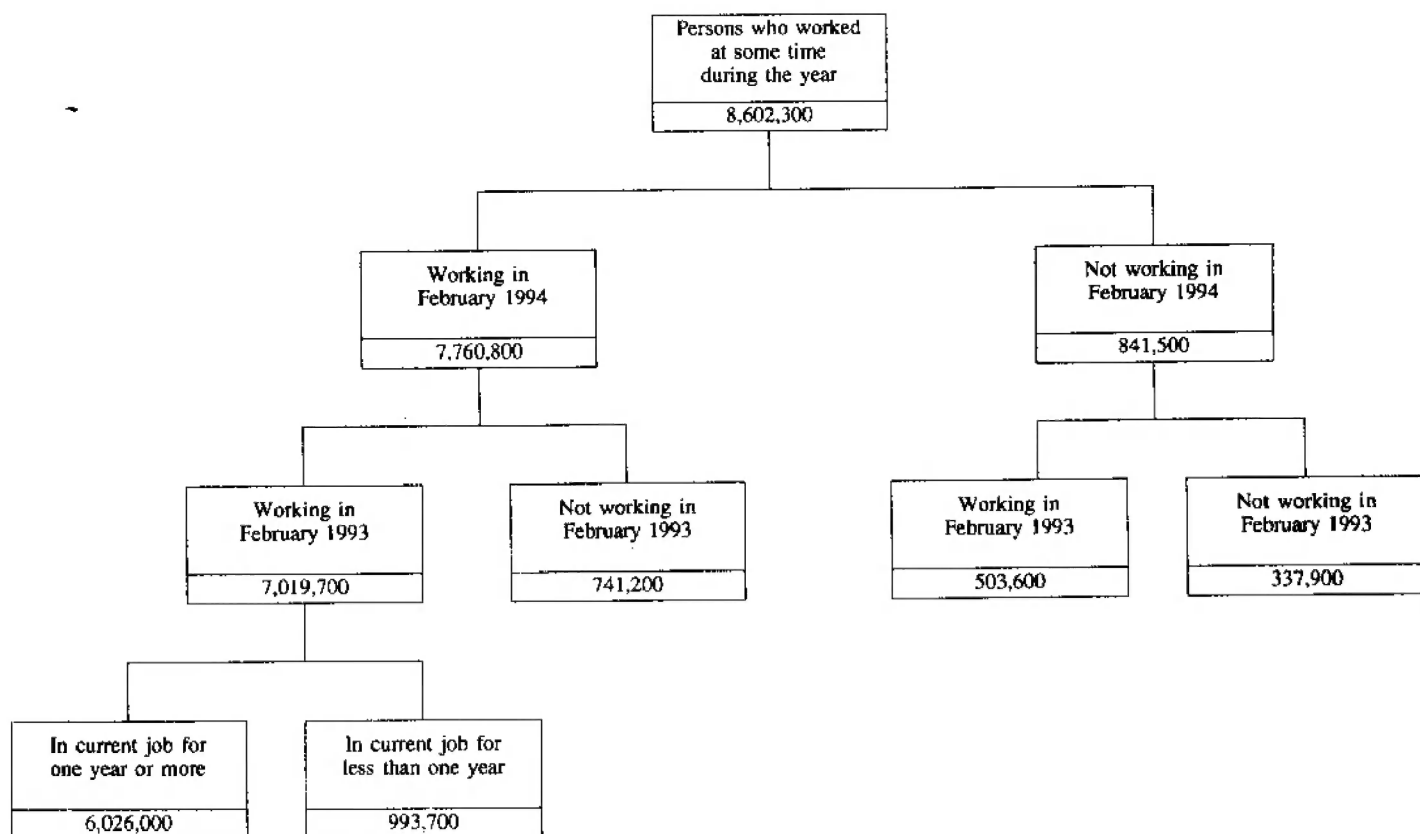

### Job mobility

The proportion of persons who had worked at some time during the year ending February 1994 who were job mobile, that is, changed their job over a one year period, was 22 per cent. This represented a 2.1 percentage point increase on the level of job mobility during the year ended February 1992 and was a return to the levels of mobility experienced in February 1990 and 1991. Before this time there had been a general increase in job mobility, from 17 per cent in February 1986 to 20 per cent in February 1989 (Table 3).

Of the 1,898,100 persons who were job mobile during the year ending February 1994 —

- 85 per cent changed their employer or business one or more times; and
- 15 per cent changed locality one or more times while still working for the same employer or business (Table 4).

**DIAGRAM 1: PERSONS WHO WORKED AT SOME TIME DURING THE YEAR ENDING FEBRUARY 1994**

**DIAGRAM 2: PERSONS WHO WORKED AT SOME TIME DURING THE YEAR ENDING FEBRUARY 1994: AGE AND PERCENTAGE JOB MOBILE**

Source: Table 4

Job mobility was greatest (31%) for persons aged 20 to 24 years and least (9.4%) for those aged 55 to 69 years. Job mobility ratios for males and females were similar (22% and 23% respectively) (Diagram 2).

Married persons were less job mobile than those who were not married (20% compared with 26%).

Some 21 per cent of persons who were a member of a family were job mobile. In married-couple families, 20 per cent of husbands and 19 per cent of wives were job mobile. In comparison, 19 per cent of male and 25 per cent of female sole parents were job mobile.

For persons who were not a member of a family, the level of job mobility was 28 per cent. Of those living alone, some 23 per cent of males and 25 per cent of females were job mobile. In comparison, job mobility amongst those not living alone was 30 per cent and 35 per cent for males and females respectively.

Job mobility amongst Australian born persons (23%) was similar to that for those born overseas in main English speaking countries (23%). However, job mobility was markedly lower (16%) amongst those born in other countries.

Some 24 per cent of persons with post-school qualifications were job mobile including 29 per cent of persons with a higher degree. In comparison, 21 per cent of persons without post-school qualifications and 15 per cent of persons still at school were job mobile (Table 4).

#### Industry

Some 7,019,700 persons who were working in February 1993 and February 1994, 86 per cent had been in their current job for the entire year, 9.0 per cent had changed to another job in the same industry and a further 5.1 per cent had changed to a job in a different industry.

Of the persons who were working in both February 1994 and February 1993 —

- the Agricultural, forestry, fishing and hunting industry had the highest proportion of persons staying in their current job for the full year (92%), while the Recreation, personal and other services industry had the lowest proportion (79%);
- the Finance, property and business services industry had the highest proportion of persons changing to another job in the same industry (12%). In comparison, 4.0 per cent of those working in the Agricultural, forestry, fishing and hunting industry changed to another job in the same industry; and
- the Recreation, personal and other services industry had the highest proportion of persons changing to a job in a different industry (9.6%), while the Community services industry had the lowest proportion (3.2%).

Of the 52,900 persons working in the Recreation, personal and other services industry in February 1993 who changed industry, 17,900 (34%) changed to the Wholesale and retail trade industry and a further 10,300 (19%) changed to the Community services industry in February 1994 (Table 5).

**DIAGRAM 3: PERSONS WHO WERE WORKING AT FEBRUARY 1993 AND FEBRUARY 1994:  
PROPORTION OF PERSONS WHO DID NOT CHANGE OCCUPATION**

Source: Table 6

### Occupation

Of the 7,019,700 persons who were working in February 1993 and February 1994, 9.9 per cent had changed job but not their occupation (major group) and 4.3 per cent had changed their occupation (major group) when changing job.

Of these 7.0 million persons —

- Managers and administrators were the most likely to have stayed in their current job for the full year (90%). In comparison, 80 per cent of Salespersons and personal service workers had stayed in their current job for the full year;
- Salespersons and personal service workers changed to a different job without changing occupation most (13%). In comparison, 6.6 per cent of Managers and administrators changed job but not occupation; and
- Salespersons and personal service workers had changed occupation most (7.1%), while Professionals changed occupation least (2.1%).

Of the 74,800 Salespersons and personal service workers who changed occupation, 21,300 (28%) became Clerks and 18,500 (25%) became Labourers and related workers (Table 6).

### State of usual residence

Some 105,200 persons who were working in both February 1993 and February 1994 had changed their State of usual residence.

Of this group, 29 per cent became usual residents of New South Wales and 28 per cent became usual residents of Queensland.

A further 14 per cent and 12 per cent respectively changed their State of usual residence to Victoria and to Western Australia (Table 8).

### Full-time/part-time status

Of the 8,602,300 persons who worked at some time during the year ending February 1994, 88 per cent (7,600,200) were working in February 1993. Of these, 5,495,900 persons (78%) were working full-time in both February 1993 and February 1994.

Some 6,026,000 persons working in February 1993 and February 1994 had been in their current job for one year or more. A further 993,700 persons had been in their current job for less than one year, and 78,600 (7.9%) had changed from a full-time job to a part-time job. A further 116,800 (12%) had changed from a part-time job to a full-time job.

A higher proportion of females than males changed their full-time/part-time status when changing jobs —

- 9.4 per cent of females who were working in both February 1993 and February 1994 changed from a full-time job to a part-time job and a further 15 per cent moved from a part-time job to a full-time job; and
- 6.8 per cent of males who were working in both February 1993 and February 1994 changed from a full-time job to a part-time job and a further 9.6 per cent went from a part-time job to a full-time job (Table 7).

**DIAGRAM 4: PERSONS WHO WERE WORKING AT THE TIME OF THE SURVEY: DURATION OF CURRENT JOB, FEBRUARY 1986 TO FEBRUARY 1994**

Source: Table 2

#### Duration of current job

The proportion of persons working in February 1994 who had been in their current job for less than one year increased to 22 per cent (24% for females and 21% for males) after decreasing each year between 1989 (28%) and 1992 (20%).

A far higher proportion of males than females had been in their current job for ten years or more (28% and 18% respectively)(Table 2).

Some 1,734,800 persons who were working in February 1994 had been in their current job for less than one year. Of these persons —

- 26 per cent worked in the Wholesale and retail trade industry (Table 10); and
- 22 per cent were Salespersons and personal service workers and a further 20 per cent were labourers and related workers (Table 11).

In contrast, of the 1,827,700 persons who were working in February 1994 and who had been in their current job for ten years or more —

- 21 per cent worked in the Community services industry (Table 10); and
- 19 per cent were Managers and administrators and 17 per cent were Professionals (Table 11).

#### Persons who ceased a job during the year

Of the 8,602,300 persons who had worked at some time during the year ending February 1994, 1,911,500 (22%) ceased a job during the year. Of those who had ceased a job, 1,158,600 (61%) were job leavers, while 753,000 (39%) were job losers. During the year ending February 1992, there were 1,021,700 job leavers and 810,500 job losers.

The majority of job losers were persons who had been retrenched (464,300). During the year ending February 1992, 547,500 persons had been retrenched. In February 1992 and February 1994, approximately two-thirds of retrenched persons were males (Table 9).

Some 44 per cent of persons who had been retrenched in the year ending February 1994 had been in their last job for less than one year. Persons who had been in their last job for more than one but less than five years comprised a further 35 per cent of retrenchments and 21 per cent were of persons who had spent more than five years in their last job.

Of the 1,158,600 job leavers, 171,900 had left their job due to unsatisfactory work conditions (compared with 125,300 persons in the year ending February 1992). Some 57 per cent of these persons had worked in that job for less than twelve months. Slightly more males (89,500) had left for this reason than females (82,400)(Table 10).

## EXPLANATORY NOTES

### Introduction

The monthly population survey (which is described in *The Labour Force, Australia* (6203.0)), comprises the monthly labour force survey and supplementary topics. This publication contains some results of a supplementary survey run in association with the February 1994 labour force survey conducted throughout Australia.

2. Of the respondents to the labour force survey, those who fell within the scope of the supplementary survey were asked additional questions. They were asked about their labour mobility for the 52 weeks up to the end of the week before the interview in February 1994. Specific questions related to the duration of current job, whether they had changed jobs or not and the number of jobs held during the period.

### Scope

3. The scope of this supplementary survey was the same as that used for the labour force survey (described in full in *The Labour Force, Australia* (6203.0)), except that it was restricted to persons who worked at some time during the year ending February 1994 and excluded persons aged 70 years or more, visitors to private dwellings, students who were boarding at school, patients in hospitals and sanatoriums and inmates of reformatories, gaols, etc.

### Coverage

4. In the population survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. See *The Labour Force, Australia* (6203.0) for more details.

### Definitions

5. Definitions of labour force and demographic classifications appearing in this publication are given in *The Labour Force, Australia* (6203.0).

6. Unless otherwise stated, all characteristics referenced in this publication relate to the week before the interview.

### Results of the survey

7. The estimates relate to persons covered by the survey in February 1994. Because of emigration, deaths, etc. not all persons with labour force experience during the period were covered. Labour mobility may relate to experience outside Australia.

8. Results of similar surveys, conducted in November 1972, February 1975 and February 1976, and annually from February 1979 to February 1992, have been given in previous issues of this publication. The survey is now conducted biennially.

9. It is proposed that this survey will be conducted next in February 1996.

### Unpublished statistics

10. As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries should be made to the contact in the Inquiries box at the front of this publication.

### Comparability of series

11. It is impracticable to obtain information relating to a whole year which is strictly comparable with that obtained in the monthly labour force survey for which the reference period is one week. The definitions used in determining the labour force status of persons in the monthly survey depend on a detailed set of questions asked about a person's labour force activity during the reference week. For the survey of labour mobility, a person is assigned to a labour force category on the basis of a more limited set of questions. It is for this reason that the terms *working* and *looking for work* are used in this survey rather than the precisely defined terms *employed* and *unemployed* used in the monthly labour force survey.

### Discontinuities in the series

12. The estimates from this survey are not strictly comparable with those obtained from all previous surveys. The scope of surveys run prior to February 1990 included persons aged 15 and over. From February 1990 the survey scope (see paragraph 3) was restricted to exclude all persons aged 70 and over. However the effect on the estimates is expected to be small.

13. The educational attainment data item in this survey has been classified according to the Australian Bureau of Statistics Classification of Qualifications (ABSCQ). The major difference between data collected according to the ABSCQ and the previous classification used is that the level of attainment and field of study in the ABSCQ are two distinct elements. Persons who received a qualification from a course of study of less than one semester full-time duration are excluded from the new classification. For a more detailed explanation of the ABSCQ, see Information Paper, *Australian Bureau of Statistics Classification of Qualifications — ABSCQ* (1263.0).

### Sample size

14. Prior to February 1990 this supplementary survey had been conducted on either 50 per cent or 75 per cent of the dwellings selected in the labour force survey. From February 1990 this has been expanded to the full sample size. As a result, the standard errors for these surveys differ from those applicable to surveys conducted before February 1990.

### Estimation procedure

15. The estimates are derived from the population survey by use of a ratio estimation procedure, which ensures that the estimates conform to an independently estimated

distribution of the population for each capital city and remainder of State by age, sex and labour force status rather than to the corresponding distribution within the sample itself.

#### **Reliability of the estimates**

16. Estimates in this publication are subject to sampling and non-sampling errors. For more information refer to the Technical Notes, page 21.

#### **Related publications**

17. Other ABS publications which may be of interest include:

*The Labour Force, Australia* (6203.0) — issued monthly

*Labour Force Experience, Australia* (6206.0) — issued annually until February 1995 and biennially thereafter

18. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the following few days. The Catalogue and Publications Advice are available from any ABS office.

#### **Symbols and other usages**

- \* subject to sampling variability too high for most practical uses. See the Technical Notes, page 21.
- .. not applicable

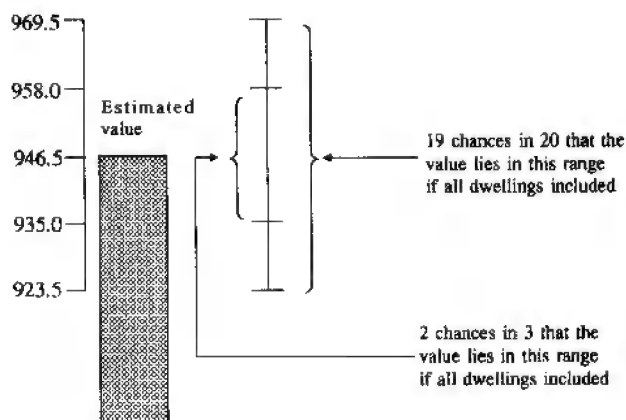

19. Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.

## TECHNICAL NOTES

Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is, they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the *relative standard error*, which is obtained by expressing the standard error as a percentage of the estimate.

2. Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors for general application is given on the following page. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics, these figures will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.

3. An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 2 shows the estimated number of males who, in February 1994, had been in their current job for less than one year as 946,500. Since this estimate is between 500,000 and 1,000,000 the standard error for Australia will be between 9,000 and 11,800 in the standard error table and can be approximated as 11,500 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall within the range 935,000 to 958,000 and about nineteen chances in twenty that the value will fall within the range 923,500 to 969,500. This example is illustrated in the following diagram:

4. As can be seen from the standard error table, *the smaller the estimate the higher is the relative standard error*. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication only estimates with relative standard errors of 25 per cent or less (and percentages based on such estimates) are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included, and are preceded by an asterisk (e.g. \*3.4) to indicate they are subject to high standard errors and should be used with caution.

5. Proportions and percentages formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is:

$$RSE(x/y) = \sqrt{[RSE(x)]^2 + [RSE(y)]^2}$$

6. Considering the example from paragraph 3 above, the 946,500 males represent 21.4 per cent of the 4,429,800 males working in February 1994. The standard error of 4,429,800 is approximately 19,900, so the relative standard error is 0.4 per cent. The relative standard error for 946,500 is 1.2 per cent. Applying the above formula, the relative standard error of the proportion is  $\sqrt{(1.2)^2 + (0.4)^2}$  or 1.1 per cent, giving a standard error for the proportion (21.4%) of 0.2 percentage points. Therefore, there are about two chances in three that the proportion of males who had been in their current job for less than one year is between 21.2 per cent and 21.6 per cent and nineteen chances in twenty the proportion is within the range 21.0 per cent to 21.8 per cent.

7. Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is also subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

$$SE(x-y) = \sqrt{[SE(x)]^2 + [SE(y)]^2}$$

8. While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations it is expected to provide a good approximation for all differences likely to be of interest in this publication.

9. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in coding and processing data. Inaccuracies of this kind are referred to as the *non-sampling error*, and they

may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce non-sampling errors to a minimum by careful design of questionnaires,

intensive training and supervision of interviewers and efficient operating procedures.

### STANDARD ERRORS OF ESTIMATES

## GLOSSARY

*Ceased a job:* refer to definitions of job leavers and job losers.

*Change of locality:* in capital cities and major towns each suburb is considered to be a different locality. Where a person works at different sites for the same employer (for example, a construction worker), their base of operations (i.e. the employer's office, depot, yard, etc.) is considered to be their place of work. The movement of an employer's operations to premises in a different locality would entail a change of job for employees.

*Current job:* the job in which the person worked in the week before the interview for an employer/business. Where the person worked in more than one job during this period, the main job, i.e. the job in which most hours were usually worked, was regarded as the current job.

*Duration of current job:* the period between the commencement of the current job up to the week before the interview.

*Duration of last job:* the period between the commencement of the last job up to the week the person ceased working in that job.

*Educational attainment:* measures the highest qualification completed by the respondent, classified according to the *Australian Bureau of Statistics Classification of Qualifications (ABSCQ)*.

*Industry:* unless otherwise specified, all occurrences of industry in this publication refer to Industry Division as defined by the *Australian Standard Industrial Classification (ASIC) 1983*. However unpublished industry data is available at the Industry Group (3-digit) level.

*Job:*

- (i) Employment as a wage or salary earner (or unpaid family helper) by a particular employer, in a particular locality; or
- (ii) Self-employment (with or without employees) in a particular locality.

*Job leavers:* persons who ceased their last job voluntarily, that is:

- (i) Because of unsatisfactory work arrangements/pay/hours; or
- (ii) The job was seasonal, temporary or a holiday job and they left that job to return to studies; or
- (iii) They retired, started a new business, got a better job, left for family or other reasons; or
- (iv) Changed locality but not employer/business for employment, personal or other reasons.

*Job losers:* persons who ceased their last job involuntarily, that is:

- (i) They were retrenched or their business closed down because of financial difficulties; or
- (ii) Their job was temporary or seasonal and they did not leave that job to return to studies; or
- (iii) Left that job because of their own ill-health or injury.

*Job mobile:* defined as a change of job which may involve a change of employer/business or a change of locality without a change of employer/business.

*Last job:* the last job in which employment was ceased during the reference period.

*Looking for work:* out of work and looking for a job.

*Main English speaking countries:* comprises the United Kingdom, Ireland, Canada, South Africa, U.S.A. and New Zealand.

*Not in the labour force:* not working and not looking for work, as defined.

*Number of changes in locality during the year:* for persons currently working, it is the number of times they have changed locality with respect to their current employer or business. For persons not currently working, it is the number of times they have changed locality with respect to their last employer or business.

*Occupation:* unless otherwise specified, all occurrences of occupation in this publication refer to Major Group as defined by the *Australian Standard Classification of Occupations (ASCO) 1986*. However, unpublished occupation data is available at the Unit Group (4-digit) level.

*Previous job:* refer to definition of last job.

*Reference period:* the 52 weeks up to the end of the week prior to interview.

*Working:* working or on leave.

## SPECIAL DATA SERVICES

### DATA ITEMS AND HOW TO ORDER SPECIAL TABLES FROM THIS SURVEY

The ABS offers a range of unpublished data from this survey upon request. When ordering special tables from this survey, please ensure you identify the **population(s)** and the **data item(s)** that you require.

This section specifies the data items, categories and populations which relate to the survey and includes an order form for special tables. More detailed breakdowns of some data items are available on request.

The population(s) for a particular data item refers to the persons in the survey to whom the data item relates.

Refer to the glossaries in this publication and in *The Labour Force, Australia* (6203.0) for definitions of data items.

### POPULATIONS

**POPULATION 1:** Persons who worked at some time during the year ending February 1994

**POPULATION 2:** Persons who were working at February 1994

**POPULATION 3:** Persons who were working at February 1994 who changed location from previous job

**POPULATION 4:** Persons who ceased a job during the year ending February 1994

**POPULATION 5:** Persons who ceased a job during the year ending February 1994 who were working at February 1994

**POPULATION 6:** Persons who were working at February 1993

**POPULATION 7:** Persons who were working at February 1993 and at February 1994
